

Seamless, Powerful Guest Wi-Fi Made Simple

Eleven's smart Wi-Fi platform provides centralized cloud management for frictionless, consistent and high performance connectivity across multiple devices and properties.

ElevenOS: The #1 Guest Wi-Fi Management Platform

Connect Guests & Devices

Secure, centralized authentication is the backbone of the ElevenOS platform. With flexible options, including auto-connect, email, and social logins, group and access codes and simple forms, ElevenOS makes it easy to connect securely with data that tells you not just what device has is on the network, but who is connected.

Manage Enterprise Networks

With over 40 million authentications each month, ElevenOS is the trusted central authentication platform for companies of all sizes in hospitality, multifamily, maritime, higher education, retail and beyond. Cloud-based ElevenOS dashboards enable simple central management of guest Wi-Fi across multiple properties, providers, and devices.

Engage With Customers

Wi-Fi isn't just about connecting devices anymore, it's about connecting people to your brand to build loyalty. Combine connectivity analytics with other guest data systems (like CRM, PMS, loyalty, and social media data) to better understand your customers and deliver a truly personalized experience.

Works With Leading Network Infrastructure

ElevenOS has pre-built integrations with the leading network providers so you can leverage your existing infrastructure and minimize cost. Get and up and running quickly and get peace of mind with a best-in-breed network solution.

ElevenOS: Like Mission Control for Better Wi-Fi

The leader in guest Wi-Fi management since 2002, top brands trust Eleven to keep millions of guests connected every month. ElevenOS cloud software platform is built for scalability. Whether you have one location or thousands, ElevenOS makes it easy to deliver a consistent and high performance guest Wi-Fi experience across disparate systems, from one central dashboard.

Secure Auto-Authentication

Connect guests to Wi-Fi instantly across multiple locations after one-time authentication with Passpoint/Hotspot 2.0. ElevenOS also enables flexible authentication options including captive portal with system integrations to check for authenticity, access or group codes, and more.

Dynamic Captive Portals

The first thing most people do when they arrive somewhere is to check for Wi-Fi. Take advantage of this touchpoint and welcome your guests with a beautifully branded portal. Easy-to-use, responsive templates enable local languages and are designed to work seamlessly across devices.

Enterprise Device Management

ElevenOS helps enterprises prepare for the growing Internet of Things (IoT). With tools to provision, monitor, and update devices, as well as manage users to minimize the complexity of running a connected business. Easily authenticate browser-less devices and manage IoT devices holistically.

Personal Area Networks

Provide a private virtual network for guests to quickly and securely access their own devices and easily connect to on-premise devices. Create the homelike experience people crave by enabling them to stream and cast content, print wirelessly, or share files with ease.

Smart Network Management

Monitor bandwidth usage in real-time and make updates with ease. Save time by optimizing performance across multiple locations and providers from one cloud-based dashboard. Additionally, Conference Manager is built to manage, monitor, and monetize Wi-Fi at events.

Actionable Analytics & Reports

Stay on the pulse of Wi-Fi performance across devices, users and properties across the enterprise with real-time analytics to monitor performance against your key business metrics. Analyze rich Wi-Fi data from custom cloud-based dashboards for single properties or across multiple.
