

CASTING

The way we consume media has evolved dramatically over the years and most people now use a variety of streaming services for movies, TV shows, music, podcasts, etc. which they expect to access wherever they are. While simple at home, enabling guests in a hotel for example to securely enjoy their own content requires a specialized setup.

A purpose-built hospitality solution, for modern casting requirements.

Guests can easily join the WiFi network and pair their smartphones or tablets with the in-room televisions without leaving personal credentials behind, to save on their data limits and roaming charges, while benefiting from the bigger screens and audio quality of the hotel equipment. They can cast content from thousands of apps – including Netflix's latest account sharing rules – in their preferred language, while using their devices for other tasks, or saving on battery life.

Revitalize In-Room Entertainment

- Designed for hospitality and brandable
- Secure and easy to manage
- Compatible with any HDMI television
- No app download or second remote control
- Supports Google TV and Netflix's new rules

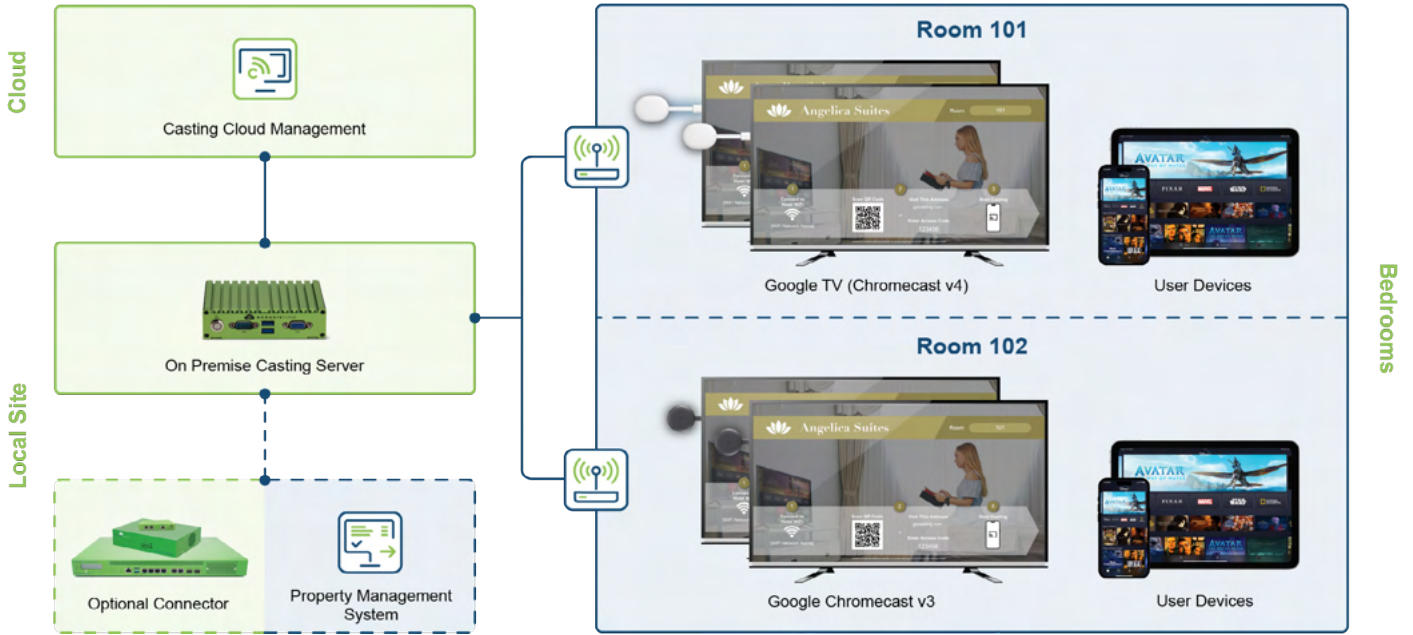

Increase Guest Loyalty

- Watch own content on in-room television
- Home-like experience, free and easy to use
- Private, no password or history left behind
- Save cellular data allowance and battery life
- Or multitask with mobile device while casting

How It Works

Based on Chromecast technology – including support for Google TV dongles, along with an optional custom secure case – Nomadix Casting works with any HDMI-capable television. The intuitive cloud management interface enables simple configuration and monitoring of the solution, including customization of the screens to reflect a property’s brand. Adding a Nomadix Gateway to the network facilitates additional services such as Property Management System integration for check-in/out and automated pairing.
