

Smart BOOKING ENGINE V2

Managing a smooth booking process and higher conversion can be a challenge. The revamped Smart Booking Engine helps your hotel operate more efficiently and better serve guests through powerful new features.

IMPROVEMENTS

Graphical renewal

Graphic design has been updated to current standards, with the option to design it in your own house style.

Better performance

Faster load times improve the user experience, which contributes to higher conversions because pages load faster.

Advanced payment options

Supports complex payment options, such as automatic payment links or pay now/pay later. Offers processing in various PMS systems with associated deposit information. Choice of various payment methods such as iDeal and various credit cards.

Conversion optimization

Higher conversion through a 3-step booking process and adding packages.

Extensive integrations

Support for advanced payment integrations, with the flexibility to set deposits and policies based on rate type and number of days before arrival.

ADD-ONS

Multiple rooms in one booking

The new booking engine now allows users to book and pay for multiple rooms in one transaction, which is useful for group bookings, for example.

Central management of content

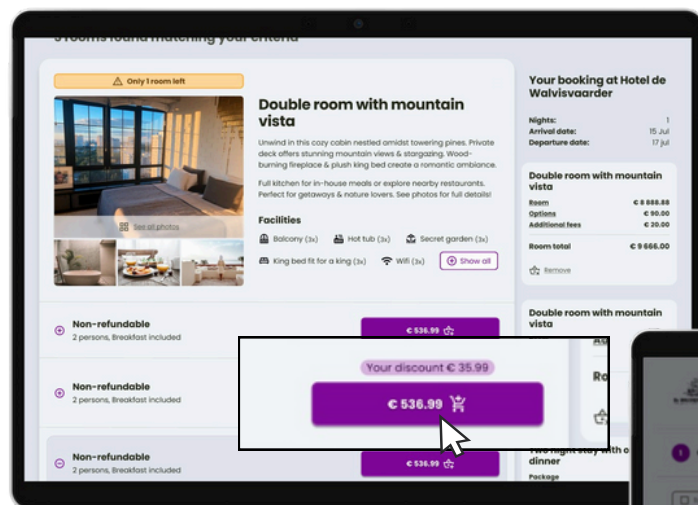

The Smart Booking Engine provides an integrated solution for content management in one central location, allowing photos, descriptions and room information to be easily synchronized between the booking engine and the Smart-Editor website.

Request a **demo** and discover how our booking engine can optimize your hotel! We take care of the configuration.
